

Aire Guardian Rigid Containment Unit

The Aire Guardian Rigid Containment Unit is ideal for containing temporary construction and renovation projects in healthcare facilities. When used with a negative pressure extraction system, it will provide an air lock with either positive or negative pressure, therefore ensuring zero dust migration.

The standard kit creates a 3 sided containment unit (2439mm x 610mm/8ft x 2ft) that can easily be sealed against a wall and the ceiling, using the wall seal kit included. The unit also features an outward swinging door with keypad entry and an exhaust vent. The exhaust vent is 254mm (10") in diameter, making it ideal for use with any of our dust extraction units.

Thanks to its modular design, if you require a larger unit it can easily be expanded in width or depth with additional panels*. The lightweight polycarbonate construction and modular design also make it easy to take apart and move around site. This clean and professional unit is easy to install and will not leave any marks on walls. The Aire Guardian unit is offered for hire through RVT Group.

Features & Benefits

- ✔ The rigid structure provides an airlock for zero dust migration.
- ✔ This unit can be teamed with RVT's Dustex dust extraction units.
- ✔ The modular system is easily expanded to suit your requirements.
- ✔ Fire Classification Certification to EN13501-1:2007+A1:2010

Key Applications

- ✔ Ideal for sensitive environments including hospitals, surgeries, clinics, care homes, laboratories and food manufacturing facilities.
- ✔ It can be used as a temporary screen when breaking through from an occupied area.

*If you require a larger unit, please contact us on 0808 178 3286 to discuss your requirements.
