

DUSTEX® Superfilta

The DUSTEX® Superfilta is designed to be used with the VENTEX® 450S centrifugal fan and flexible ducting as part of a highly effective dust or fume control system.

This bespoke filter unit allows extraction of dusty air and the creation of negative pressures in larger work areas, to protect both operatives and property from exposure to hazardous dust. The system can also be set up to provide a positive pressure of HEPA filtered air to finished areas and clean rooms.

As a general rule it is best to have the fan and Superfilta outside the work area and use ducts to extract from the area.

Features & Benefits

- ✓ Filtration to HEPA standards
- ✓ Up to 6m³/s air flows
- ✓ Separate fan and filter units allow simple transportation and flexible location on site
- ✓ High negative pressures to protect adjacent areas
- ✓ Quiet and powerful
- ✓ Simple user-serviced filters and hoppers.

Key Applications

- ✓ Filtered extraction from work areas
- ✓ Clean air supply for clean rooms etc.
- ✓ Large volume negative pressure systems
