

Mission:
To protect the long-term health of people and the environment.

Vision:
To achieve a world where the impact of site work on life, health and the environment is effectively zero.

RVT GROUP SET NEW ENVIRONMENTAL TARGETS

RVT Group are well-known for protecting people's health on site, but we are also passionate about protecting the environment, and we would like our customers to feel confident that they are working with a sustainable and reliable supply chain partner.

Over the years, we have made a considerable number of changes to reduce our impact on the environment, but we know there is still more to be done. As such, we are setting ourselves three new objectives:

- To become Carbon Neutral by 2024
- To achieve Net Zero by 2029
- To assist our customers in reducing their environmental impact on site.

We know that this journey will be a challenge and that we will only be successful if we put the environment at the heart of everything we do. As such we are making a number of internal changes:

- We engaged an external consultant to conduct a carbon footprint assessment, and we are now in the process of creating a plan to further reduce our scope 1, scope 2 and scope 3 emissions.
- 15% of our fleet vehicles will be hybrid electric by end of 2021, and we aim for this to be 25% by end of 2023. We also aim to reduce company fuel consumption by 10%.

Learn about the changes we have already made

- 100% of used filters are recycled and re-purposed as recyclate derived fuel. Soundex curtains are kept on the fleet for 3-5 years before they are also recycled and re-purposed. 100% of recyclable waste is recycled.
- We continue to reduce electricity, water, paper etc. across all of our offices. We also have a 'repair rather than replace' policy in the workshop, as extending the life of products is often much greener than purchasing new.
- Our purchasing team are currently in the process of moving our suppliers over to our new sustainable supplier agreement. As it stands, 70% of our transport suppliers are carbon neutral and we aim to increase this figure to 85% by 2023. We are also weighing up the environmental benefits of opening new distribution centres around the UK to reduce transport distance.
- Whilst we continue to reduce our emissions, we know that we may also need to offset, but we intend to select an accredited carbon offsetting company that supports carbon off-setting projects close to home.
- Charity is also close to our heart, which is why we will be adding 'Rewilding Britain' and 'The Rivers Trust' to the group of charities we support.

Direct Support for our Customers

- We will continue to invest in research and development, so that we can not only improve the efficiency of our existing products, but also bring you new innovative and sustainable solutions. Some of our new green solutions include; Envirohub Water Management Solutions, HVO fuel for our heaters, Hybrid Lighting, and there is more to come!
- In addition to providing customers with greener solutions, we would like to help offset emissions from use our equipment. As such, we would like to start gifting carbon offsets to our customers. We anticipate that we would offer carbon offsets at the end of the year, based on customer spend. We would only use an accredited carbon offsetting partner who could provide evidence of the carbon offsets.

We would love to hear from you!

Do you have an idea for a new green solution? Do you have an environmental plan you would like us to support you with? Do you have a supplier agreement you would like us to complete? Are you interested in our carbon offsetting scheme?
